

CEO NEUROFEEDBACK TRAINER

The CEO is a personal brain-trainer. Pre-configured programs give visual and auditory responses to specific mental states. The CEO consists of an integrated sensor that connects to the head, simple software, and a battery-operated hardware interface that connects to the serial port of the computer. The CEO runs under Windows 98, 2000 and XP. It installs in just a few minutes and is easy to use.

First select one of three programs:

- CHILL** to train deep relaxation
- LISTEN** to train relaxed attentiveness
- FOCUS** to train concentration

Next choose the appropriate skill level. Then use your mind to change the bars and sounds. Move to a more difficult level as you learn how to produce different mental states. Illustrated instruction cards clearly describe how to operate the CEO.

- Sharpen Concentration
- Deepen Relaxation
- Greater Mental Focus
- Learn to tune into the mental state you desire

SPECIFICATIONS:

- One 9-volt battery required (not included)
- Optical isolation on all data lines
- Sampling rate per channel: 128 Hz
- FFT Frequency resolution: 1 Hz (generated in WaveWare)
- A/D Resolution: 8 bit
- Common Mode Rejection Ratio: 100 dB minimum
- High pass filter: 2 Hz
- Low pass filter: 40 Hz – 72 dB at 60 Hz
- One low noise differential channel with fixed gain
